Restricting and Sorting Data

Copyright © 2006, Oracle. All rights reserved.

Objectives

After completing this lesson, you should be able to do the following:

- Limit the rows that are retrieved by a query
- Sort the rows that are retrieved by a query
- Use ampersand substitution in *i*SQL*Plus to restrict and sort output at run time

Limiting Rows Using a Selection

EMPLOYEES

EMPLOYEE_ID	LAST_NAME	JOB_ID	DEPARTMENT_ID
100	King	AD_PRES	90
101	Kochhar	AD_VP	90
102	De Haan	AD_VP	90
103	Hunold	IT_PROG	60
104	Ernst	IT_PROG	60
107	Lorentz	IT_PROG	60
124	Mourgos	ST_MAN	50

...

20 rows selected.

"retrieve all employees in department 90"

EMPLOYEE_ID	LAST_NAME	JOB_ID	DEPARTMENT_ID
100	King	AD_PRES	90
101	Kochhar	AD_VP	90
102	De Haan	AD_VP	90

Limiting the Rows That Are Selected

• Restrict the rows that are returned by using the where clause:

```
SELECT *|{[DISTINCT] column/expression [alias],...}
FROM table
[WHERE condition(s)];
```

• The WHERE clause follows the FROM clause.

Using the where Clause

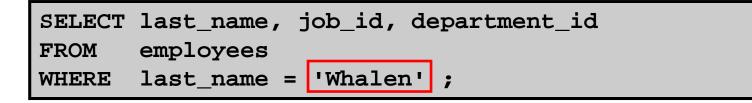

SELECT	<pre>employee_id, last_name, job_id, department_id</pre>
FROM	employees
WHERE	department_id = 90 ;

EMPLOYEE_ID	LAST_NAME	JOB_ID	DEPARTMENT_ID
100	King	AD_PRES	90
101	Kochhar	AD_VP	90
102	De Haan	AD_VP	90

Character Strings and Dates

- Character strings and date values are enclosed in single quotation marks.
- Character values are case sensitive, and date values are format sensitive.
- The default date format is DD-MON-RR.

Comparison Conditions

Operator	Meaning
=	Equal to
>	Greater than
>=	Greater than or equal to
<	Less than
<=	Less than or equal to
<>	Not equal to
BETWEEN	Between two values (inclusive)
IN(set)	Match any of a list of values
LIKE	Match a character pattern
IS NULL	Is a null value

Using Comparison Conditions

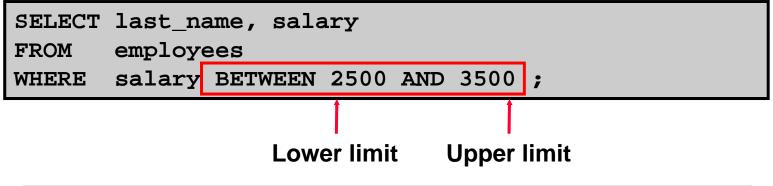

SELECT	last_name, salary
FROM	employees
WHERE	salary <= 3000 ;

LAST_NAME	SALARY
Matos	2600
Vargas	2500

Using the **BETWEEN** Condition

Use the BETWEEN condition to display rows based on a range of values:

LAST_NAME	SALARY
Rajs	3500
Davies	3100
Matos	2600
Vargas	2500

Using the IN Condition

Use the IN membership condition to test for values in a list:

SELECT	employee_id	l,]	last_na	me,	salary	, manager_id
	employees					
WHERE	manager_id	IN	(100,	101,	201)	;

EMPLOYEE_ID	LAST_NAME	SALARY	MANAGER_ID
202	Fay	6000	201
200	Whalen	4400	101
205	Higgins	12000	101
101	Kochhar	17000	100
102	De Haan	17000	100
124	Mourgos	5800	100
149	Zlotkey	10500	100
201	Hartstein	13000	100

8 rows selected.

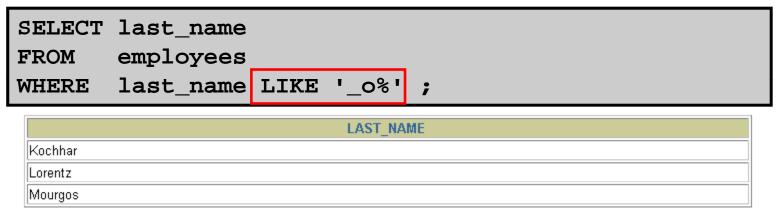

Using the LIKE Condition

- Use the LIKE condition to perform wildcard searches of valid search string values.
- Search conditions can contain either literal characters or numbers:
 - % denotes zero or many characters.
 - _ denotes one character.

SELECT	first_name
FROM	employees
WHERE	first_name LIKE 'S%' ;

Using the LIKE Condition

• You can combine pattern-matching characters:

• You can use the ESCAPE identifier to search for the actual % and _ symbols.

Using the NULL Conditions

Test for nulls with the IS NULL operator.

SELECT	last_name, manager_id
	employees
WHERE	<pre>manager_id IS NULL ;</pre>

LAST_NAME	MANAGER_ID
King	

Logical Conditions

Operator	Meaning
AND	Returns TRUE if <i>both</i> component conditions are true
OR	Returns TRUE if <i>either</i> component condition is true
NOT	Returns TRUE if the following condition is false

Using the AND Operator

AND requires both conditions to be true:

SELECT	<pre>employee_id, last_name, job_id, salary</pre>
FROM	employees
WHERE	salary >=10000
AND	job_id LIKE '%MAN%' ;

EMPLOYEE_ID	LAST_NAME	JOB_ID	SALARY
149	Zlotkey	SA_MAN	10500
201	Hartstein	MK_MAN	13000

Using the OR Operator

OR requires either condition to be true:

SELECT	<pre>employee_id, last_name, job_id, salary</pre>	
FROM	employees	
	salary >= 10000	
OR	job_id LIKE '%MAN%' ;	

EMPLOYEE_ID	LAST_NAME	JOB_ID	SALARY
100	King	AD_PRES	24000
101	Kochhar	AD_VP	17000
102	De Haan	AD_VP	17000
124	Mourgos	ST_MAN	5800
149	Zlotkey	SA_MAN	10500
174	Abel	SA_REP	11000
201	Hartstein	MK_MAN	13000
205	Higgins	AC_MGR	12000

8 rows selected.

Using the NOT Operator

last_name, job_id employees	
<pre>job_id NOT IN ('IT_PROG', 'ST_CLERK', 'SA_REP');</pre>	

LAST_NAME	JOB_ID
King	AD_PRES
Kochhar	AD_VP
De Haan	AD_VP
Mourgos	ST_MAN
Zlotkey	SA_MAN
Whalen	AD_ASST
Hartstein	MK_MAN
Fay	MK_REP
Higgins	AC_MGR
Gietz	AC_ACCOUNT

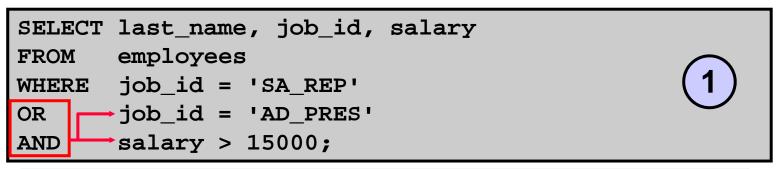

10 rows selected.

Rules of Precedence

Operator	Meaning
1	Arithmetic operators
2	Concatenation operator
3	Comparison conditions
4	IS [NOT] NULL, LIKE, [NOT] IN
5	[NOT] BETWEEN
6	Not equal to
7	NOT logical condition
8	AND logical condition
9	OR logical condition

You can use parentheses to override rules of precedence.

Rules of Precedence

LAST_NAME	JOB_ID	SALARY
King	AD_PRES	24000
Abel	SA_REP	11000
Taylor	SA_REP	8600
Grant	SA_REP	7000

SELECT last_name, job_id, salary	
FROM employees	
WHERE(job_id = 'SA_REP'	(2)
$OR \longrightarrow job_id = 'AD_PRES')$	-
AND salary > 15000;	

LAST_NAME	JOB_ID	SALARY
King	AD_PRES	24000

Using the ORDER BY Clause

- Sort retrieved rows with the ORDER BY clause:
 - ASC: ascending order, default
 - DESC: descending order
- The ORDER BY clause comes last in the SELECT statement:

SELECT	last name,	job	id,	department	id,	hire	date
FROM	employees						
ORDER BY	hire_date	;					

LAST_NAME	JOB_ID	DEPARTMENT_ID	HIRE_DATE
King	AD_PRES	90	17-JUN-87
Whalen	AD_ASST	10	17-SEP-87
Kochhar	AD_VP	90	21-SEP-89
Hunold	IT_PROG	60	03-JAN-90
Ernst	IT_PROG	60	21-MAY-91

. . .

20 rows selected.

Sorting

• Sorting in descending order:

SELECT	<pre>last_name, job_id, department_id,</pre>	hire_date
	employees	
ORDER BY	hire_date DESC ;	

• Sorting by column alias:

SELECT	<pre>employee_id,</pre>	last_name,	salary*12	annsal	\frown
FROM	employees				(2)
ORDER E	BY annsal ;				

• Sorting by multiple columns:

SELECT	last_name, department_id, salary	
FROM	employees	(3)
ORDER B	Y department_id, salary DESC;	

Substitution Variables

Substitution Variables

- Use *i*SQL*Plus substitution variables to:
 - Temporarily store values with single-ampersand (&) and double-ampersand (&&) substitution
- Use substitution variables to supplement the following:
 - WHERE conditions
 - ORDER BY clauses
 - Column expressions
 - Table names
 - Entire SELECT statements

Using the & Substitution Variable

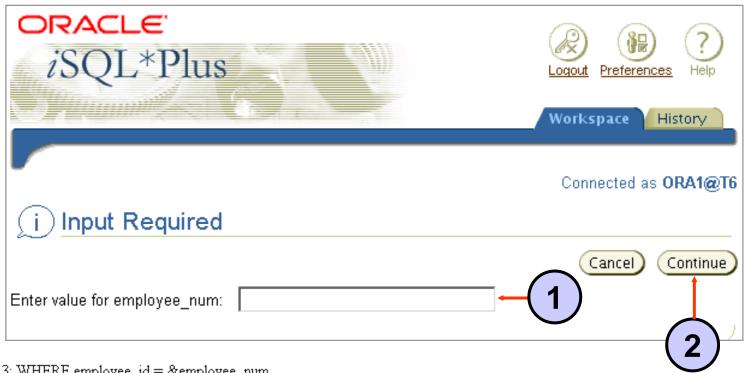

Use a variable prefixed with an ampersand (&) to prompt the user for a value:

SELECT	employee_id,	last_name,	salary,	department_id
	employees			
WHERE	<pre>employee_id =</pre>	&employee_	_num ;	

	Connected as ORA1@T6
(i) Input Required	
	Cancel Continue
Enter value for employee_num:	

Using the & Substitution Variable

old 3: WHERE employee_id = &employee_num new 3: WHERE employee_id = 101

EMPLOYEE_ID	LAST_NAME	SALARY	DEPARTMENT_ID
101	Kochhar	17000	90

Character and Date Values with Substitution Variables

Use single quotation marks for date and character values:

SELECT	last_name	, department_id,	salary*12
	employees		
WHERE	job_id =	'&job_title' ;	

i Input Required	
	Cancel Continue
Enter value for job_title: IT_PROG	

LAST_NAME	DEPARTMENT_ID	SALARY*12
Hunold	60	108000
Ernst	60	72000
Lorentz	60	50400

Specifying Column Names, Expressions, and Text

SELECT employee_id, last_name, job_id, FROM employees WHERE &condition ORDER BY ℴ_column;	column_name
i Input Required	Cancel Continue
Enter value for column_name: salary Enter value for condition: salary > 15000	Cancel Continue
Enter value for order_column: last_name	Cancel Continue

Using the && Substitution Variable

Use the double ampersand (&&) if you want to reuse the variable value without prompting the user each time:

SELECT	employee_id,	last_name,	job_id,	&&column_name
FROM	employees			
ORDER BY	&column_name	;		
(j) Inpu	t Required			

	Cancel Continue
Enter value for column_name: department_ld	

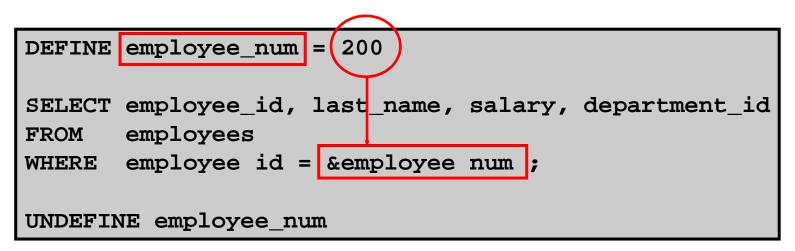

EMPLOYEE_ID	LAST_NAME	JOB_ID	DEPARTMENT_ID
200	Whalen	AD_ASST	10
201	Hartstein	MK_MAN	20

. . .

20 rows selected.

Using the *i*SQL*Plus DEFINE Command

- Use the *i*SQL*Plus DEFINE command to create and assign a value to a variable.
- Use the *i*SQL*Plus UNDEFINE command to remove a variable.

Using the VERIFY Command

Use the VERIFY command to toggle the display of the substitution variable, both before and after *i*SQL*Plus replaces substitution variables with values:

SET VEI	RIFY ON
SELECT	<pre>employee_id, last_name, salary, department_id</pre>
FROM	employees
WHERE	<pre>employee_id = &employee_num;</pre>

"employee_num" 200	
	<pre>employee_id = &employee_num employee_id = 200</pre>

Summary

In this lesson, you should have learned how to:

- Use the WHERE clause to restrict rows of output:
 - Use the comparison conditions
 - Use the BETWEEN, IN, LIKE, and NULL conditions
 - Apply the logical AND, OR, and NOT operators
- Use the ORDER BY clause to sort rows of output:

```
SELECT *|{[DISTINCT] column/expression [alias],...}
FROM table
[WHERE condition(s)]
[ORDER BY {column, expr, alias} [ASC|DESC]];
```

 Use ampersand substitution in *i*SQL*Plus to restrict and sort output at run time

Practice 2: Overview

This practice covers the following topics:

- Selecting data and changing the order of the rows that are displayed
- Restricting rows by using the WHERE clause
- Sorting rows by using the ORDER BY clause
- Using substitution variables to add flexibility to your SQL SELECT statements
