# Retrieving Data Using the SQL SELECT Statement

Copyright © 2006, Oracle. All rights reserved.

# Objectives

After completing this lesson, you should be able to do the following:

- List the capabilities of SQL SELECT statements
- Execute a basic SELECT statement
- Differentiate between SQL statements and iSQL\*Plus commands

#### **Capabilities of SQL** SELECT Statements

#### **Projection**

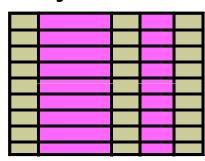

Table 1

#### **Selection**

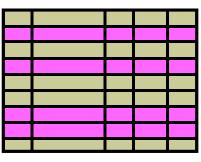

Table 1

Table 1

#### **Basic** SELECT Statement

SELECT \*|{[DISTINCT] column|expression [alias],...}
FROM table;

- **SELECT** identifies the columns to be displayed.
- FROM identifies the table containing those columns.

# **Selecting All Columns**

#### SELECT \*

FROM

departments;

DEPARTMENT_ID	DEPARTMENT_NAME	MANAGER_ID	LOCATION_ID
10	Administration	200	1700
20	Marketing	201	1800
50	Shipping	124	1500
60	Π	103	1400
80	Sales	149	2500
90	Executive	100	1700
110	Accounting	205	1700
190	Contracting		1700

8 rows selected.

## **Selecting Specific Columns**

SELECT department\_id, location\_id

departments; FROM

DEPARTMENT_ID	LOCATION_ID
10	1700
20	1800
50	1500
60	1400
80	2500
90	1700
110	1700
190	1700

8 rows selected.

# Writing SQL Statements

- SQL statements are not case sensitive.
- SQL statements can be on one or more lines.
- Keywords cannot be abbreviated or split across lines.
- Clauses are usually placed on separate lines.
- Indents are used to enhance readability.
- In *i*SQL\*Plus, SQL statements can optionally be terminated by a semicolon (;). Semicolons are required if you execute multiple SQL statements.
- In SQL\*Plus, you are required to end each SQL statement with a semicolon (;).

# **Column Heading Defaults**

- *i*SQL\*Plus:
  - Default heading alignment: Center
  - Default heading display: Uppercase
- SQL\*Plus:
  - Character and Date column headings are left-aligned
  - Number column headings are right-aligned
  - Default heading display: Uppercase

# **Arithmetic Expressions**

Create expressions with number and date data by using arithmetic operators.

Operator	Description
+	Add
-	Subtract
*	Multiply
1	Divide

#### **Using Arithmetic Operators**

SELECT last\_name, salary, salary + 300

employees; FROM

LAST_NAME	SALARY	SALARY+300
King	24000	24300
Kochhar	17000	17300
De Haan	17000	17300
Hunold	9000	9300
Ernst	6000	6300

. . .

20 rows selected.

## **Operator Precedence**

SELECT	last_name,	salary,	12*salary+100	
FROM	employees;			

SALARY	12*SALARY+100
24000	288100
17000	204100
17000	204100
	24000

20 rows selected.

SELECT	last_name,	salary,	12*(salary+100)	
FROM	<pre>employees;</pre>			

LAST_NAME	SALARY	12*(SALARY+100)
King	24000	289200
Kochhar	17000	205200
De Haan	17000	205200
		1

20 rows selected.

# **Defining a Null Value**

- A null is a value that is unavailable, unassigned, unknown, or inapplicable.
- A null is not the same as a zero or a blank space.

SELECT last\_name, job\_id, salary, commission\_pct FROM employees;

JOB_ID	SALARY	COMMISSION_PCT
AD_PRES	24000	
AD_VP	17000	
SA_MAN	10500	.2
SA_REP	11000	.3
SA_REP	8600	.2
AC_ACCOUNT	8300	
	AD_PRES AD_VP SA_MAN SA_REP SA_REP	AD_PRES     24000       AD_VP     17000       SA_MAN     10500       SA_REP     11000       SA_REP     8600

### Null Values in Arithmetic Expressions

# Arithmetic expressions containing a null value evaluate to null.

SELECT last_name FROM employed	
TROM Emproyee	
Kochhar	
King	
LAST_NAME	12*SALARY*COMMISSION_PCT
Zlotkey	25200
Abel	39600
Taylor	20640
• • •	
Gietz	

20 rows selected.

# **Defining a Column Alias**

A column alias:

- Renames a column heading
- Is useful with calculations
- Immediately follows the column name (There can also be the optional AS keyword between the column name and alias.)
- Requires double quotation marks if it contains spaces or special characters or if it is case sensitive

# **Using Column Aliases**

SELECT last\_name AS name, commission\_pct comm

ORACLE

employees; FROM

NAME	СОММ	
King		
Kochhar		
De Haan		

. . .

20 rows selected.

SELECT last\_name "Name" , salary\*12 "Annual Salary" employees; FROM

Name	Annual Salary	
King		288000
Kochhar		204000
De Haan		204000

. . .

20 rows selected.

## **Concatenation Operator**

A concatenation operator:

- Links columns or character strings to other columns
- Is represented by two vertical bars (||)
- Creates a resultant column that is a character expression

SELECT	last_name   job_id AS "Employees"
FROM	employees;

Employees
KingAD_PRES
KochharAD_VP
De HaanAD_VP

20 rows selected.

# **Literal Character Strings**

- A literal is a character, a number, or a date that is included in the SELECT statement.
- Date and character literal values must be enclosed by single quotation marks.
- Each character string is output once for each row returned.

## **Using Literal Character Strings**

SELECT	last_name    <mark>' is a '</mark>   job_id
	AS "Employee Details"
FROM	employees;

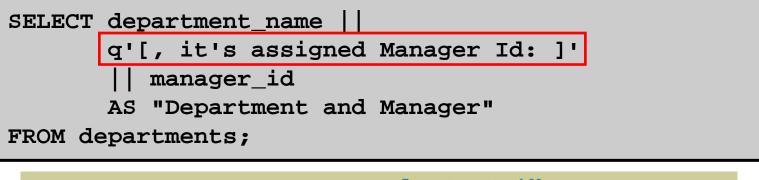

Employee Details
(ing is a AD_PRES
Kochhar is a AD_VP
)e Haan is a AD_VP
lunold is a IT_PROG
Ernst is a IT_PROG
.orentz is a IT_PROG
Aourgos is a ST_MAN
Rajs is a ST_CLERK

. . .

20 rows selected.

## Alternative Quote (q) Operator

- Specify your own quotation mark delimiter
- Choose any delimiter
- Increase readability and usability

	Department and Manager
Administration, it's assigned manager ID: 200	
Marketing, it's assigned manager ID: 201	
Shipping, it's assigned manager ID: 124	
•••	
8 rows selected.	

# **Duplicate Rows**

# The default display of queries is all rows, including duplicate rows.

SELECT department_id FROM employees;	1
DEPARTMENT_ID	
	90
	90
	90
20 rows selected.	
SELECT DISTINCT department_id FROM employees;	(2)
FROM Emproyees,	
DEPARTMENT_ID	
	10
	10 20
	20

#### SQL and *i*SQL\*Plus Interaction

# SQL Statements Versus *i*SQL\*Plus Commands

#### SQL

- A language
- ANSI standard
- Keyword cannot be abbreviated

SQL

statements

 Statements manipulate data and table definitions in the database

#### *i*SQL\*Plus

- An environment
- Oracle-proprietary
- Keywords can be abbreviated
- Commands do not allow manipulation of values in the database
- Runs on a browser
- Centrally loaded; does not have to be implemented on each machine

# **Overview of** *i***SQL\*Plus**

After you log in to *i*SQL\*Plus, you can:

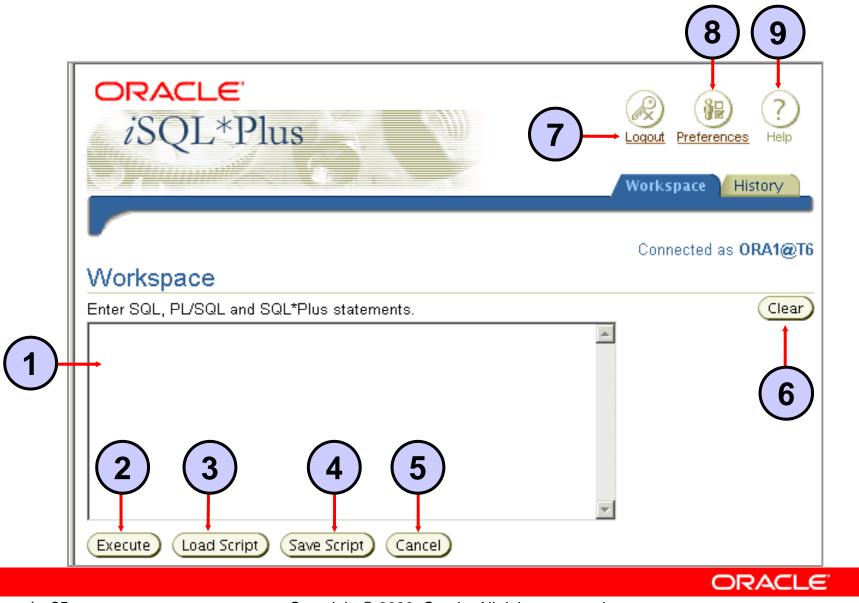

- Describe table structures
- Enter, execute, and edit SQL statements
- Save or append SQL statements to files
- Execute or edit statements that are stored in saved script files

# Logging In to *i*SQL\*Plus

#### From your browser environment:

Address 🛃 http://esslin05:5	560/isqlplus/			<b>▼</b> ∂Go

## **Displaying Table Structure**

# Use the *i*SQL\*Plus DESCRIBE command to display the structure of a table:

DESC[RIBE] tablename

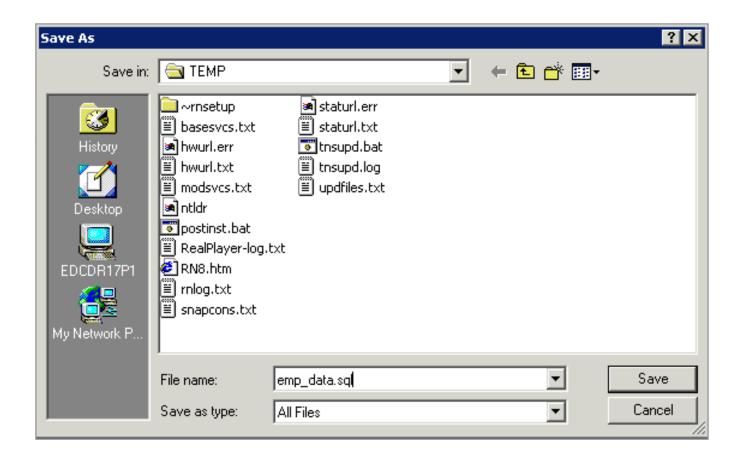

## **Displaying Table Structure**

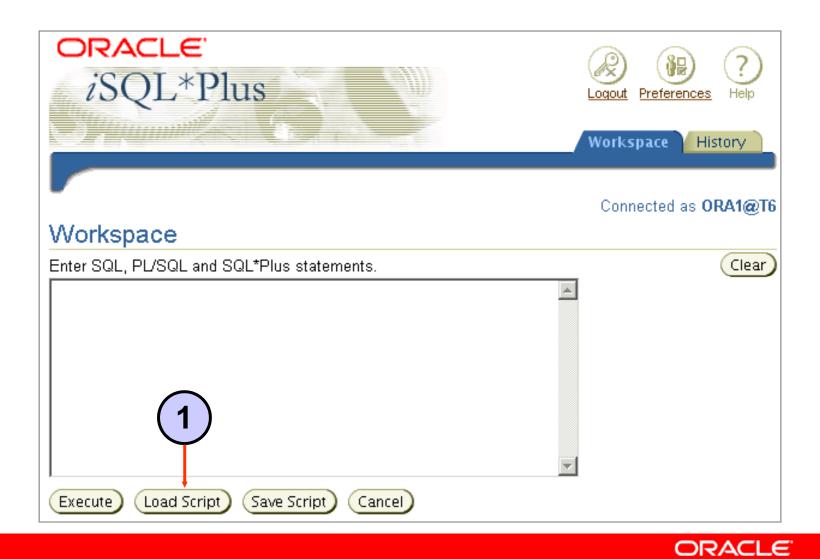

#### DESCRIBE employees

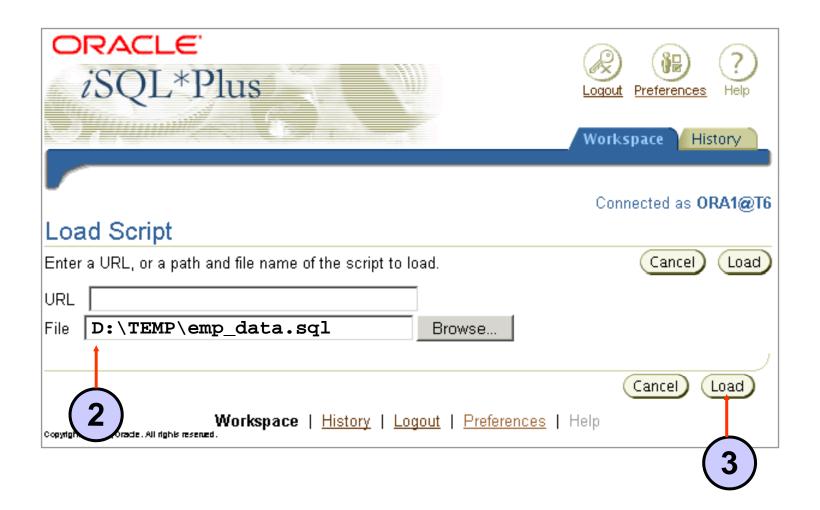

Name	Null?	Туре
EMPLOYEE_ID	NOT NULL	NUMBER(6)
FIRST_NAME		VARCHAR2(20)
LAST_NAME	NOT NULL	VARCHAR2(25)
EMAIL	NOT NULL	VARCHAR2(25)
PHONE_NUMBER		VARCHAR2(20)
HIRE_DATE	NOT NULL	DATE
JOB_ID	NOT NULL	VARCHAR2(10)
SALARY		NUMBER(8,2)
COMMISSION_PCT		NUMBER(2,2)
MANAGER_ID		NUMBER(6)
DEPARTMENT_ID		NUMBER(4)

	SELECT DISTINCT department_id FROM employees;
	SELECT department_id FROM employees;
	SELECT department_name    ' , '    q'X it's assigned manager ID: X'    manager
	SELECT last_name    ' is a '    job_id AS "Employee Details" FROM employees;
	SELECT last_name    job_id AS "Employees" FROM employees;
	SELECT last_name "Name", 12 * salary "Annual Salary" FROM employees;
	SELECT last_name AS name, commission_pct AS comm FROM employees;
	SELECT last_name,12 * salary * commission_pct FROM employees;
	SELECT last_name, job_id, salary, commission_pct FROM employees;
	<u>SELECT last_name, salary, 12 * (salary + 100) FROM employees;</u>

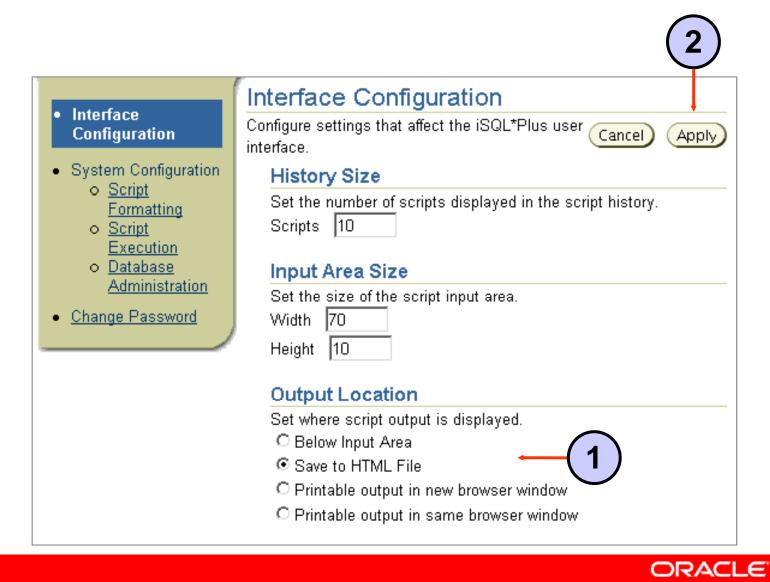

# *i*SQL\*Plus History Page

#### Setting *i*SQL\*Plus Preferences

#### **Setting the Output Location Preference**

# Summary

In this lesson, you should have learned how to:

- Write a SELECT statement that:
  - Returns all rows and columns from a table
  - Returns specified columns from a table
  - Uses column aliases to display more descriptive column headings
- Use the *i*SQL\*Plus environment to write, save, and execute SQL statements and *i*SQL\*Plus commands

```
SELECT * | { [DISTINCT] column/expression [alias],...}
FROM table;
```

## **Practice 1: Overview**

This practice covers the following topics:

- Selecting all data from different tables
- Describing the structure of tables
- Performing arithmetic calculations and specifying column names
- Using *i*SQL\*Plus
