Creating Other Schema Objects

Copyright © 2006, Oracle. All rights reserved.

Objectives

After completing this lesson, you should be able to do the following:

- Create simple and complex views
- Retrieve data from views
- Create, maintain, and use sequences
- Create and maintain indexes
- Create private and public synonyms

Database Objects

Object	Description
Table	Basic unit of storage; composed of rows
View	Logically represents subsets of data from one or more tables
Sequence	Generates numeric values
Index	Improves the performance of some queries
Synonym	Gives alternative names to objects

What Is a View?

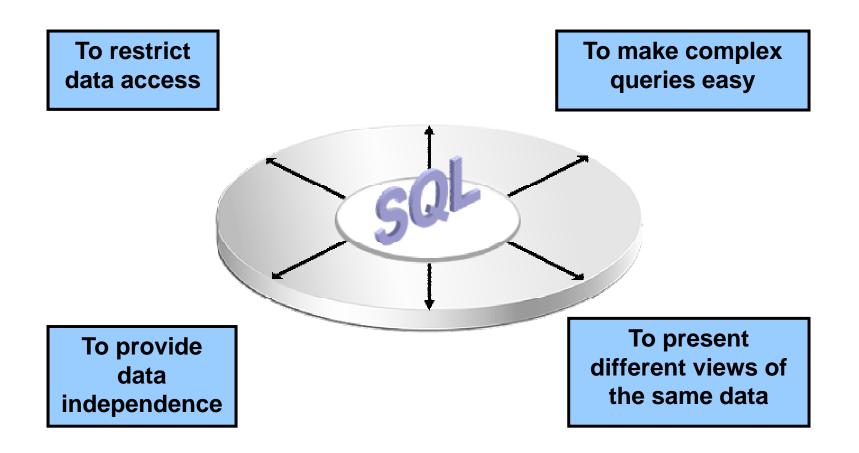

EMPLOYEES table

MPLOYEE_ID	FIRST_NAME	LAST_NAME	EMAIL	PHONE_NUMBER	HIRE_DATE	JOB_ID	SAL/
100	Steven	Kirç	SKING	515.123.4567	17-JUN-87	AD_FRES	240
101	Neena	Kochhar	NKOCHHAR	515.123.4568	21-SEP-89	AD_VP	170
102	Lex	De Haan	LDEHAAN	515.123.4569	13-JAN-93	AD_VP	170
103	Alexander	Hunold	AHUNO_D	590.423.4567	03-JAN-90	IT_PROG	9
104	Bruce	Ernst	EERNST	690 423 4668	21 MAY 9	ecerq_Ti	6
107	Diana	Lorentz	CLORENTZ	590 403 5562	07-FEB-99	IT_PROG	42
124	Kevar	Mourges	INMOURGOS	650.123.5234	18-NOV-99	ST_WAN	58
141	"reona	94c	TRAUS	660.121.3009	12.001.95	ST CLERK	3
142	Úuriis 👘	Davies	CDAVIES	050 101 2994	DI-JAN-97	ST_ULERK	3
14)	Randali	Mates	RMATCB	660.121.0074	15-MAR (N	OT_OLÉRK	2
EMPLOYE	E ID	LAST	NAME	SALARY		ST_CLERK	2
	-	Zlotkey	_	1050	D JAN (I)	SA_MAN	10
		Abel		1100	10 MAY-96	SA_REP	11
	176	Taylcr		060	00 ·MAR-98	SA_REP	8
170	Kimberery	Giant	NORANI	011.44.1044.423203	∠+-MAY-99	SA_REP	70
200	Jennifer	Whalen	JWHALEN	515.123.4444	17-SEP-87	AD_ASST	4.
201	Michael	Hartstein	MHARTSTE	515.123.5555	17-FEB-96	MK_MAN	13
202	Pat	Fay	PFAY	603.123.6666	17-AUG-97	MK_REP	6
205	205 Shelley		SHIGGINS	515.123.8080	07-JUN-94	AC_MGR	12
206 William		Gietz	WGIETZ	515.123.8181	07-JUN-94	AC_ACCOUNT	8

20 rows selected.

ORACLE

Advantages of Views

ORACLE

Simple Views and Complex Views

Feature	Simple Views	Complex Views
Number of tables	One	One or more
Contain functions	No	Yes
Contain groups of data	No	Yes
DML operations through a view	Yes	Not always

Creating a View

• You embed a subquery in the CREATE VIEW statement:

```
CREATE [OR REPLACE] [FORCE <u>NOFORCE</u>] VIEW view
[(alias[, alias]...)]
AS subquery
[WITH CHECK OPTION [CONSTRAINT constraint]]
[WITH READ ONLY [CONSTRAINT constraint]];
```

• The subquery can contain complex SELECT syntax.

Creating a View

• Create the EMPVU80 view, which contains details of employees in department 80:

CRE	ATE VIEW	empvu80
AS	SELECT	<pre>employee_id, last_name, salary</pre>
	FROM	employees
	WHERE	<pre>department_id = 80;</pre>
Viev	v created	1.

• Describe the structure of the view by using the *i*SQL*Plus DESCRIBE command:

DESCRIBE empvu80

Creating a View

 Create a view by using column aliases in the subquery:

CREATE VIEW	salvu50	
AS SELECT	<pre>employee_id ID_NUMBER,</pre>	last_name NAME,
	salary*12 ANN_SALARY	
FROM	employees	
WHERE	<pre>department_id = 50;</pre>	
View created	1.	

 Select the columns from this view by the given alias names:

Retrieving Data from a View

SELECT	*
FROM	salvu50;

ID_NUMBER	NAME	ANN_SALARY
124	Mourgos	69600
141	Rajs	42000
142	Davies	37200
143	Matos	31200
144	Vargas	30000

Modifying a View

• Modify the EMPVU80 view by using a CREATE OR REPLACE VIEW clause. Add an alias for each column name:

CREATE OR REP	LACE VIEW empvu80		
(id_number,	name, sal, department_id)		
AS SELECT em	ployee_id, first_name ' '		
	last_name, salary, department_id		
FROM em	ployees		
WHERE de	<pre>partment_id = 80;</pre>		
View created.			

• Column aliases in the CREATE OR REPLACE VIEW clause are listed in the same order as the columns in the subquery.

ORACLE

Creating a Complex View

Create a complex view that contains group functions to display values from two tables:

CREATE OR REPLACE VIEW dept_sum_vu			
(name, minsal, maxsa	l, avgsal)		
AS SELECT d.departme	nt_name, MIN(e.salary),		
MAX(e.sala	ry),AVG(e.salary)		
FROM employees	e JOIN departments d		
ON (e.departm	<pre>ent_id = d.department_id)</pre>		
GROUP BY d.departme	nt_name;		
View created.			

Rules for Performing DML Operations on a View

- You can usually perform DML operations on simple views.
- You cannot remove a row if the view contains the following:
 - Group functions
 - A GROUP BY clause
 - The DISTINCT keyword
 - The pseudocolumn ROWNUM keyword

Rules for Performing DML Operations on a View

You cannot modify data in a view if it contains:

- Group functions
- A GROUP BY clause
- The DISTINCT keyword
- The pseudocolumn ROWNUM keyword
- Columns defined by expressions

Rules for Performing DML Operations on a View

You cannot add data through a view if the view includes:

- Group functions
- A GROUP BY clause
- The DISTINCT keyword
- The pseudocolumn ROWNUM keyword
- Columns defined by expressions
- NOT NULL columns in the base tables that are not selected by the view

Using the WITH CHECK OPTION Clause

• You can ensure that DML operations performed on the view stay in the domain of the view by using the WITH CHECK OPTION clause:

CRI	EATE (OR	REPL	ACE	VIEW	emp	vu20				
AS	SELE	СТ	ł	۲							
	FROM		em	ploy	zees						
	WHER	E	de	part	ment	_id	= 20				
	WITH	CH	IECK	OPTI	ION C	ONSI	RAINT	emj	pvu20_	_ck	;
Vie	ew cr	eat	ed.								

• Any attempt to change the department number for any row in the view fails because it violates the WITH CHECK OPTION constraint.

ORACLE

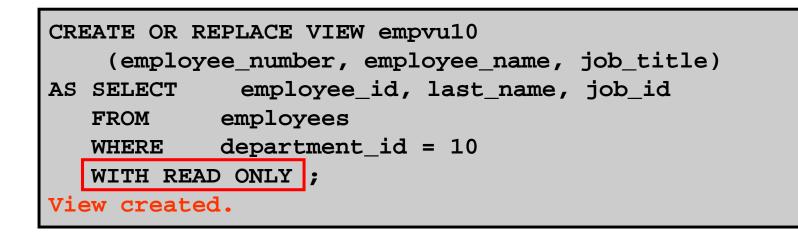

Denying DML Operations

- You can ensure that no DML operations occur by adding the WITH READ ONLY option to your view definition.
- Any attempt to perform a DML operation on any row in the view results in an Oracle server error.

Denying DML Operations

Removing a View

You can remove a view without losing data because a view is based on underlying tables in the database.

DROP VIEW view;

DROP VIEW empvu80; View dropped.

Practice 10: Overview of Part 1

This practice covers the following topics:

- Creating a simple view
- Creating a complex view
- Creating a view with a check constraint
- Attempting to modify data in the view
- Removing views

Sequences

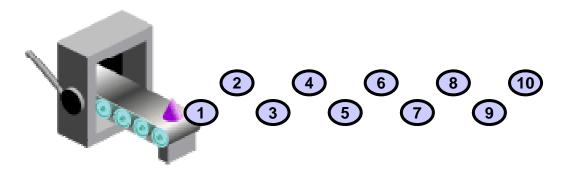

Object	Description
Table	Basic unit of storage; composed of rows
View	Logically represents subsets of data from one or more tables
Sequence	Generates numeric values
Index	Improves the performance of some queries
Synonym	Gives alternative names to objects

Sequences

A sequence:

- Can automatically generate unique numbers
- Is a sharable object
- Can be used to create a primary key value
- Replaces application code
- Speeds up the efficiency of accessing sequence values when cached in memory

ORACLE

CREATE SEQUENCE Statement: Syntax

Define a sequence to generate sequential numbers automatically:

CREATE	SEQUENCE sequence
	[INCREMENT BY n]
	[START WITH n]
	$[\{MAXVALUE n \mid NOMAXVALUE\}]$
	$[\{MINVALUE n \mid NOMINVALUE\}]$
	[{CYCLE NOCYCLE}]
	$[\{CACHE n NOCACHE\}];$

Creating a Sequence

- Create a sequence named DEPT_DEPTID_SEQ to be used for the primary key of the DEPARTMENTS table.
- Do not use the CYCLE option.

CREATE	SEQUENCE	dept_deptid_seq
		INCREMENT BY 10
		START WITH 120
		MAXVALUE 9999
		NOCACHE
		NOCYCLE;
Sequend	ce created	1.

NEXTVAL and CURRVAL Pseudocolumns

- NEXTVAL returns the next available sequence value. It returns a unique value every time it is referenced, even for different users.
- CURRVAL obtains the current sequence value.
- NEXTVAL must be issued for that sequence before CURRVAL contains a value.

Using a Sequence

 Insert a new department named "Support" in location ID 2500:

INSERT	INTO	departments(department_id,	
		department_name, location_id)	
VALUES		(dept_deptid_seq.NEXTVAL,	
		'Support', 2500);	
1 row created.			

 View the current value for the DEPT_DEPTID_SEQ sequence:

```
SELECT dept_deptid_seq.CURRVAL
FROM dual;
```

ORACLE

Caching Sequence Values

- Caching sequence values in memory gives faster access to those values.
- Gaps in sequence values can occur when:
 - A rollback occurs
 - The system crashes
 - A sequence is used in another table

Modifying a Sequence

Change the increment value, maximum value, minimum value, cycle option, or cache option:

ALTER SEQUENCE dept_deptid_seq INCREMENT BY 20 MAXVALUE 9999999 NOCACHE NOCYCLE; Sequence altered.

Guidelines for Modifying a Sequence

- You must be the owner or have the ALTER privilege for the sequence.
- Only future sequence numbers are affected.
- The sequence must be dropped and re-created to restart the sequence at a different number.
- Some validation is performed.
- To remove a sequence, use the DROP statement:

```
DROP SEQUENCE dept_deptid_seq;
Sequence dropped.
```

Indexes

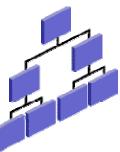

Object	Description
Table	Basic unit of storage; composed of rows
View	Logically represents subsets of data from one or more tables
Sequence	Generates numeric values
Index	Improves the performance of some queries
Synonym	Gives alternative names to objects

Indexes

An index:

- Is a schema object
- Can be used by the Oracle server to speed up the retrieval of rows by using a pointer
- Can reduce disk I/O by using a rapid path access method to locate data quickly
- Is independent of the table that it indexes
- Is used and maintained automatically by the Oracle server

ORACI

How Are Indexes Created?

 Automatically: A unique index is created automatically when you define a PRIMARY KEY or UNIQUE constraint in a table definition.

 Manually: Users can create nonunique indexes on columns to speed up access to the rows.

Creating an Index

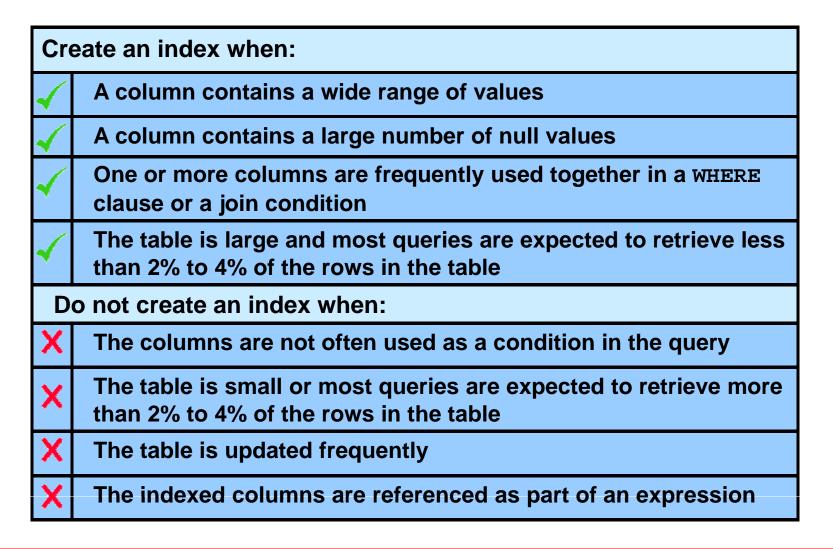

• Create an index on one or more columns:

CREATE INDEX index ON table (column[, column]...);

• Improve the speed of query access to the LAST_NAME column in the EMPLOYEES table:

CREATE INDEX emp_last_name_idx ON employees(last_name); Index created.

Index Creation Guidelines

Removing an Index

 Remove an index from the data dictionary by using the DROP INDEX command:

DROP INDEX index;

Remove the UPPER_LAST_NAME_IDX index from the data dictionary:

```
DROP INDEX emp_last_name_idx;
Index dropped.
```

• To drop an index, you must be the owner of the index or have the DROP ANY INDEX privilege.

Synonyms

Object	Description
Table	Basic unit of storage; composed of rows
View	Logically represents subsets of data from one or more tables
Sequence	Generates numeric values
Index	Improves the performance of some queries
Synonym	Gives alternative names to objects

Synonyms

Simplify access to objects by creating a synonym (another name for an object). With synonyms, you can:

- Create an easier reference to a table that is owned by another user
- Shorten lengthy object names

CREATE [PUBLIC] SYNONYM synonym FOR object;

Creating and Removing Synonyms

 Create a shortened name for the DEPT_SUM_VU view:

CREATE SYNONYM d_sum

FOR dept_sum_vu;

Synonym Created.

• Drop a synonym:

DROP SYNONYM d_sum; Synonym dropped.

Summary

In this lesson, you should have learned how to:

- Create, use, and remove views
- Automatically generate sequence numbers by using a sequence generator
- Create indexes to improve query retrieval speed
- Use synonyms to provide alternative names for objects
