Cara Membaca h-Index dan i10-index

Artikel dan Tulisan saya sudah mulai terbaca oleh google sejak tahun 2009, ada sebanyak 3169 Kutipan, dan dalam 5 tahun terakhir yaitu sejak tahun 2012, tulisan saya yang di kutip ada sebanyak 2592

h-indek:Dari 21 Artikel saya, telah dikutip oleh rata-rata 21 artikel lainnya.

i10-index: 10 Artikel saya dalam 5 tahun terakhir, di kutip oleh rata-rata 26 artikel lainnya

h-index oleh:Jorge E Hirsch

Seorang fisikawan di Universitas California bernama Jorge E Hirsch mengusulkan sebuah indeks yang ia namakan indeksh. Meski indeks ini masih sangat baru dan masih terus diteliti keakuratannya, metode ini telah menjadi pembicaraan hangat di forum-

Seorang ilmuwan memiliki indeks-h jika ia memiliki paper sebanyak h dengan jumlah kutipan untuk setiap paper tersebut minimal sama dengan h. Jadi, jika jumlah total papernya adalah P, maka ia akan memiliki sebanyak P - h paper dengan jumlah kutipan lebih kecil dari h untuk setiap papernya.

Dengan metode ini Jorge Hirsch mendapatkan Edward Witten sebagai fisikawan dengan indeks-h tertinggi (110). Witten dikenal sebagai fisikawan yang bergerak dibidang teori superstring dan paling banyak dikutip papernya. Bahkan, sekitar 17 papernya telah memiliki jumlah kutipan lebih dari 1000 per paper. Fisikawan lain yang memiliki indeks-h tinggi adalah pemenang Nobel Steven Weinberg (h = 88) dan Frank Wilczek (h = 68), sedangkan kosmolog Stephen Hawking berada di urutan berikutnya (h = 62).

Jorge Hirsch memperkirakan bahwa nilai h antara 10 dan 12 merupakan nilai rata-rata yang diperoleh seorang associate professor di Amerika, sedangkan professor penuh umumnya akan mencapai nilai h =18. Penerima fellowship Himpunan Fisika Amerika biasanya memiliki indeks antara 15 hingga 20, sedangkan anggota US National Academy of Science umumnya memiliki h = 45.

(Terry Mart, pengajar pada Departemen Fisika, FMIPA UI) http://staff.fisika.ui.ac.id/tmart/h_indeks.html

Terimakasih, semoga bermanfaat ...
