### ECS Toyota Young Investigator Fellowship

For young professionals and scholars pursuing research in batteries, fuel cells and hydrogen, and future sustainable technologies.

At least one \$50,000 fellowship is available annually.  
More than \$1.4 million awarded since 2015!

Application deadline: January 31, 2023

TOYOTA

**Learn more. Apply today!**

## PREFACE

It is our great honor and pleasure to introduce the Proceedings of the 3rd International Conference on Informatics, Engineering, Science, and Technology (INCITEST 2020). The event is valuable and meaningful since it brings together scientists, engineers, researchers, practitioners, students, and civil society organization representatives to nurture research networks between universities and industries. With its main theme on "Humanized Technology, the Digital Journey to Win Competition", this event is expected to serve as a platform of gathering for anyone interested in exploring potential solutions and answering issues and challenges to enter the 5.0 society. Amid the worldwide spread of the novel coronavirus (COVID-19) and the uncertainty surrounding the end of this pandemic, there are several issues we should describe as follows:

1. Universitas Komputer Indonesia (UNIKOM) as the organizer of INCITEST 2020 will hold the conference on 11th June 2020 in an online or virtual format. The organizing committee will manage the conference from our campus which is located in Bandung, West Java Province, Indonesia.
2. In this correlation, we should adhere to the regulation of the government of West Java Province and the government of the Republic of Indonesia which currently is implementing Large-Scale Social Restrictions to reduce the risk of virus transmission. Therefore, the online conference is considered the best way we can do to serve our participants concerning the fact that people safety is second to none. In this condition, there is no specific date deemed safe to which we could postpone the conference until either worldwide travel or crowd-gathering is safe again. We have all put so much effort in preparing the papers, organizing the event, as well as conducting the review process, working on the program, and everything surrounding it that we feel very motivated to pull this through
3. The conference is divided into two sessions: plenary and parallel sessions. In the plenary session, we will use zoom as the media. Besides, to assure the dissemination of the conference to all participants, we will also broadcast the plenary session live using Open Broadcaster Software (OBS) connected to

YouTube live streaming and IG TV. Moreover, we will use live chat on YouTube and Google forms for the discussion session.

4. The plenary session will be chaired by one moderator who will not only be critically summarizing the keynote presentations but also handling participants' enthusiasm in asking any possible questions. In doing so, the participants will be following the conference at their respective personal corners through YouTube live streaming and IG TV.
5. The plenary session will be presented by our keynote speakers in online format (via Zoom) from each country such as Prof. Abdulkareem from Malaysia, Prof. Yuto Lim from Japan, and Irfan Dwi Sumitra, Ph.D. from Indonesia. Each keynote has 45 minutes duration including the discussion session.
6. Following the success of INCITEST 2018 and 2019, the enthusiastic responses to the call-for-papers in the third INCITEST were increasing. More than 450 papers were submitted to the organizing committee from both local and foreign participants. A peer-review process has been conducted to all the articles based on their originality and quality, resulting in 347 accepted papers to be presented.
7. Of 347 accepted papers, 216 of them will be presented via Zoom in the duration of 10 minutes for each paper. Additionally, 129 papers will be displayed in the poster session (the link of the posters will be available on the INCITEST website).
8. The parallel session will be divided into 10 classes; each class will be participated by around 21 to 22 presenters. A parallel session chair will manage the presentation time and discussion session in each class. Each presenter should present their paper within 5 minutes via Zoom. 5 minutes after the presentation will be given to each of them for the discussion session.

We hope that with the above arrangement, we can serve our participants in the best way we could. The conference's success is also due to the hard work of all involved parties. Therefore, the organizing committee would like to express appreciation to all supporters, sponsors, and participants for a great contribution to

the conference's success. Many thanks go as well to all of the reviewers who helped us maintain the quality of manuscripts included in the Proceedings published by IOP. We also express our sincere thanks to the members of the organizing team for their hard work.

Finally, our continuing success of this conference series can be one of indicator that we have through our right pathway to realign technology with the best interests of humanity. We hope this first time experience of the online conference in the 3<sup>rd</sup> INCITEST will bring fruitful outcomes as well as give the participants great experience in an online conference.

Thank you

Best Regards,

Dr. Poni Sukaesih Kurniati, S.IP, M.Si.  
The Chief of the Conference

## LIST OF COMMITTEES OF INCITEST 2020

### Organizing Committee:

1. Dr. Lia Warlina.
2. Dr. Poni Sukaesih Kurniati, S.IP., M.Si.
3. Bobi Kurniawan, S.T., M.Kom
4. Senny Luckyardi, S.P

### Advisory Board & Scientific Committee:

1. Dr.Phil Michael Grosch – Karlsruhe Institute of Technology KIT, Germany
2. PD Dr. Andreas Ufen – German Institute of Global and Area Studies, Germany
3. Prof. Hiroyuki Iida – Japan advanced Institute of Science and Technology
4. Ryuhei Uehara, Ph.D – Japan Advanced Institute of Science and Technology
5. Dr. Eng. Farid Triawan – Tokyo Institute of Technology, Japan
6. Prof. Rongtau Hou – Nanjing University Of Information Science and Technology, China
7. Prof. Tinghuai Ma – Nanjing University of Information Science and Technology, China
8. Assoc. Prof. Bing Han- Xidian University, China
9. Assoc Prof M. Roil Bilad – Universiti Teknologi Petronas, Malaysia
10. Assoc Prof. Zulfan Adi – Universiti Teknologi Petronas, Malaysia
11. Assoc. Prof. Dr. Masnizah Mohd – University Kebangsaan Malaysia
12. Dr. Nordin Abu-Bakar- Universiti Teknologi Mara (UiTM) Malaysia
13. Prof. Nursuriati Jamil-Universiti Teknologi Mara (UiTM) Malaysia
14. Assoc. Prof. Dr. H. Eddy Soeryanto Soegoto – Universitas Komputer Indonesia
15. Dr. Ir. Herman S – Universitas Komputer Indonesia
16. Dr. Yeffry Handoko Putra – Universitas Komputer Indonesia
17. Dr. Andi Harapan, M.T – Universitas Komputer Indonesia
18. Dr. Dhini Dewiyanti Tantarto, M.T – Universitas Komputer Indonesia
19. Dr. Henny, ST.,M.T – Universitas Komputer Indonesia
20. Dr. Salmon Priadji Martana, ST.,M.T – Universitas Komputer Indonesia
21. Dr. Y. Djoko Setiarto, ST.,M.T – Universitas Komputer Indonesia
22. Irfan Dwiguna Sumitra, M.Kom., Ph.D – Universitas Komputer Indonesia
23. Dr. Ade Gafar Abdullah – Universitas Pendidikan Indonesia
24. Dr. Eng. Asep Bayu Dani Nandiyanto – Universitas Pendidikan Indonesia
25. Syeileendra Pramuditya, PhD – Institut Teknologi Bandung, Indonesia
26. Prof. Dr. Norita Md Norwawi- Universiti Sains Islam Malaysia
27. Prof. Dr. Setyawan Purnama, MSi – Universitas Gadjah Mada
28. Dr. Sandra Sukmaning Adji – Universitas Terbuka

**Abstract.** Nowadays, electricity has become a priority in daily life and can even be considered as a primary human need. On the other hand, the excessive use of electricity or energy and the increase in population is one of the factors that can increase energy requirements. In Indonesia, the use of electricity comes from very limited natural resources. Therefore, energy savings should be implemented, either by using as necessary or even making an update that can sustain existing electrical energy. Apart from saving energy, it would be better to create new energy with minimal effort. Like producing energy from daily human activities, one of it is walking. The result is the creation of Kinetic Paving material technology that when people step on it will produce electricity. The benefits of this technology can create electricity that can be used for the environment of this kinetic paving. As for lighting in paving as lighting art or as a source of energy for surrounding buildings. Kinetic Paving is applied in pedestrian traffic spaces. This energy is expected to help the community and the surrounding environment. This is an update that should have been implemented. When natural resources are getting low and energy prices are getting higher, we need all these reforms.

## 1. Introduction

The population in Indonesia is increasing each day. Therefore, the needs are also increasing. One of them is the need for electricity. Electricity is now a primary need in daily life because many things are done every day using electricity. The use of electricity in the house or other building functions is not effective where the excessive use of electrical energy. So that the energy spent is very much and not proportional to the energy produced. So that resources are increasingly depleting. Therefore, we need technology that can create its energy. [1] To produce electrical energy, the easiest method is the result of the transformation of kinetic energy. The kinetic energy that is easily obtained in the middle of the city is the movement of the human itself. It can be concluded that human energy in walking can be used as kinetic energy which will be a source of electrical energy. Indonesia is one of the countries with quite a large number of young people. Youth tend to have more outside activities than other groups. So that at some point the place is quite active with the activities of this young man. This can be an advantage in terms of creating electrical energy from kinetic energy.

Previous research has shown that excessive use of energy will lead to the extinction of natural resources and the possibility of fossil fuels and oil will be depleted around the 21st century. [2] What is needed in this research is kinetic paving which is connected to a USB port and street lights. The top surface of the paving uses materials from recycled mattresses, athletic tracks or tires where the material is flexible. Installation of kinetic paving is quite easy because there is no need for excavation and it must be in an area with a high pedestrian level. This kinetic paving works when the pedestrian

Content from this work may be used under the terms of the [Creative Commons Attribution 3.0 licence](https://creativecommons.org/licenses/by/3.0/). Any further distribution of this work must maintain attribution to the author(s) and the title of the work, journal citation and DOI.

walks on one of the paving blocks, the piezoelectric will receive a kinetic force and push down the electromagnetic generator and produce 2-4 watts / s of electrical energy per step. This electrical energy will be channelled to a USB port that serves to charge a cell phone and to a street lamp that becomes an aesthetic visualization of light. With the density of the urban population, every single square can get 50,000 steps a day and enough to turn on the lights at the bus stop all night long [3].

The existence of this research is expected to be able to help supply electricity for facilities to the surrounding buildings. And with the existence of kinetic paving, it is expected that young people will be more active in walking which will affect electricity energy income and as a science and invitation to apply the concept of future health for each individual. The research method used is the installation of kinetic paving in areas that have a high pedestrian level such as educational institutions, sidewalks, parking lots and commercial areas.

## **2. Method**

This research method used a descriptive method as a description of the energy benefits of kinetic paving. To complete this research, literature studies from national and international reference books as well as journals are also used with related discussions on paving, energy, and energy saving.

## **3. Results and Discussion**

### *3.1 Paving Block*

Paving blocks or a type of brick but made of concrete that functions as a floor covering. Paving blocks have a variety of shapes, but with a lock when installed interlocking between 1 paving with other paving. The installation is quite easy and has aesthetic value so that the paving block is always an alternative to outdoor floor coverings [4].

### *3.2 Energy Saving*

Energy-saving or energy saving is an effort that emphasizes to conserve energy use which mostly comes from non-renewable natural resources. Saving energy is also an effort to reduce the yield of waste energy in the form of CO<sub>2</sub> which is quite dangerous for the surrounding environment. Usually, this energy-saving effort is by utilizing resources that can be renewed or which always exist indirectly or naturally [5].

### *3.3 Kinetic Energy*

Kinetic energy is the energy possessed by an object or device whose movements affect the energy produced. The more movements, the greater the energy produced [6]. Kinetic energy movement can be vibration or displacement. However, it has a rhythm, strength, and speed of movement that takes many forms [7].

### *3.4 Piezoelektrik Material*

Piezoelectric is a material in the form of crystals and consists of many chemical elements contained in it [8]. This material is gaining in popularity because it has a fairly high energy effect, high strength and is resistant to humidity and extreme temperatures which is above 100°C [9]. The excess effectiveness of this material depends on its geometric shape, structure, and thickness [10].

### *3.5 Kinetic Paving*

Kinetic Paving is an object or device that utilizes or collects pressure from footsteps and is transformed into energy. The energy is stored or directly channelled to something that requires energy around the kinetic paving. Paving kinetic will be placed in crowded centre such as in stations, malls, pedestrian ways or sports facilities that cover the floor using the pavement [6].

### 3.6 Utilization of Paving Kinetic

Paving kinetic when viewed on environmental aspects, there are many positive aspects. Starting from the energy source, namely the power from the footrest that previously did not mean anything, but after the existence of this paving kinetic technology, the power from the footing is very meaningful because of the source of kinetic energy for this technology (See Figure 1 and Figure 2).

**Figure 1.** Kinetic Paving in the street

**Figure 2.** Detail of Kinetic Paving

Paving kinetic is also a substitute for energy from non-renewable natural resources. Although not as a whole, minimizing will be better. So that CO<sub>2</sub> emissions will be reduced and air pollution will be reduced. Transformed energy can also be additional energy for outdoor facilities or buildings. With the existence of kinetic paving, it becomes a source of public education to encourage people to walk more frequently instead of using vehicles ineffectively and producing more CO<sub>2</sub> emissions. Kinetic paving is also a sustainable material so it can be used in a very long term as a technological marker of highly advanced kinetic paving (See Figure 3).

**Figure 3.** Diagram of Kinetic Paving

#### 4. Conclusion

The results of this study are that energy can still be produced by humans as easily as possible by utilizing existing resources. The use of kinetic paving is very useful in producing electrical energy which is an alternative energy for facilities and buildings. This kinetic paving will become a material technology that will compete with the international market. Kinetic paving is also an educational medium for the cloud community regarding energy conversion and material technology. Kinetic Paving can be an alternative energy that helps outdoor facilities such as USB ports, street lights, and electricity supplies in buildings. Kinetic paving is also a progress in the field of materials technology with a sustainable and futuristic approach.

#### Acknowledgement

We would like to thank the parties who's involved in this research, who helped in the distribution of ideas so that the authors can complete the writing of this research well.
