Abstract

This paper aims to show the benefits of accounting applications for small and medium business enterprises (SMEs), as a means to shape entrepreneurs in managing business financial data, easily and safely because making financial data manually is a way that carries a high risk. The method used was a method of description that is by reviewing research that has been made before. The results of this study indicate the use of accounting applications that helps entrepreneurs in processing financial data easily, because it is done automatically and managed with real-time count. Unlike the manual recording that spends time only to register and calculate financial statements one by one. This result is observed in the way that employees do data management. Users of accounting applications are easy to record, calculate daily transactions. Whereas cafes that record manual data, they would spend a lot of time calculating their financial data one by one. The conclusion of the results of this study proves that the use of applications helps entrepreneurs in managing finances in an easy and reliable way.
