Preface

It is our great honor and pleasure to introduce the Proceedings of the 2nd International Conference on Informatics, Engineering, Science, and Technology (INCITEST 2019). The second INCITEST was organized by Universitas Komputer Indonesia and was held in Bandung, Indonesia, on 18 July 2019. With the theme **“Building Competitive Advantage to Face Industry 4.0”**, the conference provides a platform to share ideas and current research in the areas of Informatics, Engineering, Science, and Technology with the participants from the scientist, engineers, researchers, practitioners, civil society and organization representative.

Following the success of the first INCITEST, the enthusiasm of second international conference INCITEST has increased. The high enthusiasm was reflected from high number of paper submission with more than 350 papers from the participants coming from several cities and countries. Therefore, it is allowed multinational and cultural exchange of ideas in facing the issue and challenges in Industry 4.0. In order to improve the quality of the papers and extend the publication, all papers have been carefully selected and peer-reviewed.

This conference can only succeed as a team effort. Our sincere thanks conveyed to the Rector of Universitas Komputer Indonesia for his support to the success of the event. We would also like to thank all participants for their contributions to the Conference program and for their contributions to these Proceedings. We also honored and grateful with the cooperation between the organizers of INCITEST 2019 with the international reputable publisher, Institute of Physics (IOP) for publishing the selected conference papers. We hope that the collection of the paper will be a valuable resource and will stimulate further research. Our highest appreciation also goes to the Reviewers, Editor and Advisory Boards who helped us maintain the high quality of manuscripts included in the Proceedings published by IOP. It is our pleasant duty to acknowledge the Directorate of Higher Education and Ministry of National Education for the budget support in INCITEST 2019.

We are looking forward to the third INCITEST next year that will be held on July, 2020 at the campus of Universitas Komputer Indonesia, Bandung, Indonesia.

Thank you,

Best Regards,

Dr.Lia Warlina

The Chief of the Conference

LIST OF COMMITTEES OF INCITEST 2019

Organizing Committee

1. Dr. Lia Warlina.
2. Dr. Poni Sukaesih Kurniati, S.IP., M.Si.
3. Bobi Kurniawan, S.T., M.Kom
4. Senny Luckyardi, S.P

Advisory Board & Scientific Committee:

1. Dr.Phil Michael Grosch – Karlsruhe Institute of Technology KIT, Germany
2. PD Dr. Andreas Ufen – German Institute of Global and Area Studies, Germany
3. Prof. Hiroyuki Iida – Japan advanced Institute of Science and Technology
4. Ryuhei Uehara, Ph.D – Japan Advanced Institute of Science and Technology
5. Dr. Eng. Farid Triawan – Tokyo Institute of Technology, Japan
6. Prof. Rongtau Hou – Nanjing University Of Information Science and Technology, China
7. Prof. Tinghuai Ma – Nanjing University of Information Science and Technology, China
8. Assoc. Prof. Bing Han- Xidian University, China
9. Assoc Prof M. Roil Bilad – Universiti Teknologi Petronas, Malaysia
- 10.Assoc Prof. Zulfan Adi – Universiti Teknologi Petronas, Malaysia
- 11.Assoc. Prof. Dr. Masnizah Mohd – University Kebangsaan Malaysia
- 12.Dr. Nordin Abu-Bakar- Universiti Teknologi Mara (UiTM) Malaysia
- 13.Prof. Nursuriati Jamil-Universiti Teknologi Mara (UiTM) Malaysia
- 14.Assoc. Prof. Dr. H. Eddy Soeryanto Soegoto – Universitas Komputer Indonesia
- 15.Dr. Ir. Herman S – Universitas Komputer Indonesia
- 16.Dr. Yeffrie Handoko Putra – Universitas Komputer Indonesia
- 17.Dr. Andi Harapan, M.T – Universitas Komputer Indonesia
- 18.Dr. Dhini Dewiyanti Tantarto, M.T – Universitas Komputer Indonesia
- 19.Dr. Henny, ST.,M.T – Universitas Komputer Indonesia
- 20.Dr. Salmon Priadji Martana, ST.,M.T – Universitas Komputer Indonesia
- 21.Dr. Y. Djoko Setiarto, ST.,M.T – Universitas Komputer Indonesia
- 22.Irfan Dwiguna Sumitra, M.Kom., Ph.D – Universitas Komputer Indonesia
- 23.Dr. Ade Gafar Abdullah – Universitas Pendidikan Indonesia
- 24.Dr. Eng. Asep Bayu Dani Nandiyanto – Universitas Pendidikan Indonesia
- 25.Syeilendra Pramuditya, PhD – Institut Teknologi Bandung, Indonesia
- 26.Prof. Dr. Norita Md Norwawi- Universiti Sains Islam Malaysia
- 27.Prof.Dr.Setyawan Purnama,MSi – Universitas Gadjah Mada
- 28.Dr. Sandra Sukmaning Adji – Universitas Terbuka

Peer review statement

All papers published in this volume of *IOP Conference Series: Materials Science and Engineering* have been peer reviewed through processes administered by the proceedings Editors. Reviews were conducted by expert referees to the professional and scientific standards expected of a proceedings journal published by IOP Publishing.

FACIAL EXPRESSIONS RECOGNITION USING MARKOV STATIONARY FEATURE - VECTOR QUANTIZATION AND SUPPORT VECTOR MACHINE METHOD.....	152
<i>I Maliki, F S Jarockohir</i>	
A SURVEY POSITIVE ENGAGEMENT OF LEARNING COMMUNITY FOR INFORMAL EDUCATION TO SUPPORT COMMUNITY	158
<i>Winanti, Ford Lumban Gaol, Meyliana, Harjanto Prabowo</i>	
DESIGN OF THE INFORMATION SYSTEM FOR KINDERGARTEN LEARNING EVALUATION USED KANBAN METHODOLOGY	165
<i>M Fitriawati, R H Lestari</i>	
IMPLEMENTATION OF ATTENDANCE SYSTEM USING RASPBERRY PI	171
<i>A P Sujana, A Y Prastyawan</i>	
DATA MINING: THE CLASSIFICATION METHOD TO PREDICT THE TYPES OF MOTORCYCLE SPARE PARTS TO BE RESTOCKED	180
<i>S L B Ginting, Y R Ginting, Sutono, A Rakhman</i>	
INFORMATION AND COMMUNICATION TECHNOLOGY DEVELOPMENT FOR ENTREPRENEURS.....	186
<i>S Rahmawati, I Rochmawati</i>	
IMPLEMENTATION OF USER CENTERED DESIGN METHOD IN DESIGNING ANDROID- BASED JOURNAL REMINDER APPLICATION	193
<i>I Afrianto, R G Guntara</i>	

FORECASTING METHODS COMPARATION BASED ON SEASONAL PATTERNS FOR PREDICTING MEDICINE NEEDS WITH ARIMA METHOD, SINGLE EXPONENTIAL SMOOTHING	199
<i>I A Zahra, Y H Putra</i>	
IMPLEMENTATION OF CRITICAL PATH METHOD IN PROJECT PLANNING AND SCHEDULING	209
<i>S Atin, R Lubis</i>	
IMPLEMENTATION OF DECISION TREE ALGORITHM IN CUSTOMER RECENCY, FREQUENCY, MONETARY, AND COST PROFILING: A CASE STUDY OF PLASTIC PACKING INDUSTRY	215
<i>W Gata, Iskandar, H Basri, D A Puspitawati, S Hidayat, Walim</i>	
APPLICATION OF COMPUTER-ASSISTED ANALYTIC HIERARCHY PROCESS METHOD TO EVALUATE EMPLOYEE PERFORMANCE	223
<i>S Nurhayati</i>	
DEVELOPMENT OF ENTERPRISE ARCHITECTURE PLANNING FOR SCHOOL BASED MANAGEMENT IN PUBLIC HIGH SCHOOL	230
<i>I Tresna S, A Hadiana</i>	
WEBSITE DEVELOPMENT OF INDONESIAN ART HIGHER EDUCATION INSTITUTIONS HISTORICAL ARCHIVES	237
<i>D Trihanondo, D Endriawan</i>	
THE EFFECT OF ELECTRONIC SERVICE QUALITY ON CUSTOMERS SATISFACTION AND LOYALTY IN ONLINE SHOPPING	243
<i>L Kusdibyo, A Februadi</i>	
INFLUENCE OF FINANCIAL TECHNOLOGY ON NATIONAL FINANCIAL INSTITUTIONS.....	251
<i>H Purnomo, S Khalda</i>	
MOBILE AUGMENTED REALITY FOR LEARNING TRADITIONAL CULTURE USING MARKER BASED TRACKING	258
<i>B Arifitama, A Syahputra, S D H Permana, K B Y Bintoro</i>	
DESIGN OF STUDENT ATTENDANCE INFORMATION SYSTEM WITH FINGERPRINTS.....	266
<i>M D Rahmatya, M F Wicaksono</i>	
FINGERPRINT IDENTIFICATION USING BOZORTH AND BOYER-MOORE ALGORITHM	271
<i>S Supatmi, I D Sumitra</i>	
RISK ANALYSIS OF DUTCH HEALTHCARE COMPANY INFORMATION SYSTEM.....	278
<i>R F Septian, G C Pamuji</i>	
WEB-BASED ACADEMIC INFORMATION SYSTEM	287
<i>R F Syafariani, A Devi</i>	
QUALITY ANALYSIS OF MOBILE WEB SERVER	293
<i>E B Setiawan, A Setiyadi, R Wahdiniwaty</i>	
COMPUTER-ASSISTED PERFORMANCE MEASUREMENT USING ANALYTIC HIERARCHY PROCESS	299
<i>A D Andriana, R Susanto</i>	

APPLICATION OF DISTRIBUTED DATABASES FOR INFORMATION SYSTEMS FERTILIZER MANAGEMENT	305
<i>A H Ali, R A Nugraha</i>	
FUZZY LOGIC CONTROL APPLICATION: DESIGN AND SIMULATION FOR WASHING MACHINE	312
<i>G G Hungilo, G Emmanuel, J Maiga, A J Santoso</i>	
USER INTERFACE DESIGN OF MOBILE-BASED COMMERCE	319

Abstract. The purpose of this research was to provide information about the prediction of student interest in the laptop specifications through the application of data mining using the C4.5 algorithm. The method used in this research is a survey method by conducting interview. This research was conducted by conducting interviews with several students. The results of this research was a decision tree that describes the laptop specifications that is most in demand by students, so students who want to have a laptop can easily determine laptop specifications based on the number of enthusiasts on certain laptop specifications. The technique used in the application of data mining in this research is a classification technique. The conclusion in this research is that by implementing data mining, students don't need to look for various sources to find laptop specifications that are needed by students in meeting their college needs in long time.

1. Introduction

Laptop specifications are the most important thing to determine which laptops the user will choose. Laptop specifications are determined based on user requirements. In addition to user needs, laptop specifications are usually also determined by the purchasing power of the user. Of course in this case, students as users in this research will choose laptop specifications that are suitable for student needs and student purchasing power. To make it easier for students to determine laptop specifications, data mining is used. Data mining is a process of extracting or filtering data with a large enough data size through certain processes to find useful information from the large data [1]. One technique that is owned by data mining is classification. The technique consists of several methods and produces a decision tree [2]. The C4.5 algorithm is one of the algorithms used in classification techniques. With the implementation of data mining using the C4.5 algorithm, information about the specifications of the laptop that is most in demand by students can be known. Technological development makes data processing more dynamic [3]. Data mining can be used for various things, one of which is data mining is used to obtain information such as determining the specifications of laptops. For example, laptop specifications that are needed by students that are appropriate for the purchasing power of students. Variety of laptop specifications is certainly a major problem for students in determining the required laptop specifications. By utilizing the application of data mining using the C4.5 algorithm, the specifications of the laptop that students need will be drawn through the decision tree. The decision tree is an illustration of the decision procedure for determining the class of a specified variable [4][5]. The decision tree itself can help students determine which laptop specifications should be chosen. However, even though the decision tree has given students an overview of the specifications of the laptop that are most in demand by students, it is possible for students to choose other specifications according to the needs of the student. Therefore, the purpose of this research was to provide information about the prediction of student interest in laptop specifications through the application of data mining using the C4.5 algorithm.

2. Method

The method used in this research is a survey method by conducting interviews and questionnaires as a research tool. Interviews were conducted and questionnaires were distributed to students of the 7th semester Information System students of Universitas Komputer Indonesia as the population or sample to determine the relationship or influence of each variable tested [6]. The sampling technique used in this research is purposive sampling. Purposive sampling is one of the non-probability sampling techniques that is very effective when a research focuses on certain criteria [7].

3. Results and Discussion

To support the application of data mining using the C4.5 algorithm, of course the sample data is needed. Table 1 contains data from the results of interviews in this study. Sample data were obtained through interviews with several respondents who came from the 7th semester Information System students of Universitas Komputer Indonesia which can be seen in Table 1.

Table 1. Sample Data

No	Respondents	Brand	Processor	VGA	RAM	Operating System	Price	Results
1	Responden 1	Asus	Intel	On Board	2 GB	DOS	Cheap	Purchased
2	Responden 2	Dell	Intel	On Board	2 GB	DOS	Cheap	Not Purchased
3	Responden 3	Axioo	Intel	On Board	2 GB	Windows	Cheap	Not Purchased
4	Responden 4	Acer	Intel	Nvidia	4 GB	Windows	Middle	Purchased
5	Responden 5	Asus	AMD	AMD	4 GB	DOS	Middle	Purchased
6	Responden 6	Asus	Intel	Nvidia	8 GB	Windows	Expensive	Not Purchased
7	Responden 7	HP	Intel	Nvidia	4 GB	Windows	Middle	Not Purchased
8	Responden 8	Lenovo	AMD	AMD	4 GB	DOS	Cheap	Not Purchased
9	Responden 9	Lenovo	AMD	AMD	4 GB	Windows	Middle	Purchased
10	Responden 10	Asus	AMD	On Board	2 GB	DOS	Cheap	Not Purchased
11	Responden 11	HP	Intel	Nvidia	2 GB	Windows	Middle	Purchased
12	Responden 12	Acer	Intel	Nvidia	2 GB	Windows	Middle	Purchased
13	Responden 13	Acer	AMD	AMD	8 GB	Windows	Expensive	Not Purchased
14	Responden 14	Apple	Intel	On Board	2 GB	Mac OS	Cheap	Not Purchased
15	Responden 15	Apple	Intel	On Board	4 GB	Mac OS	Middle	Purchased
16	Responden 16	Asus	Intel	Nvidia	4 GB	Windows	Middle	Purchased
17	Responden 17	Apple	Intel	On Board	4 GB	Mac OS	Cheap	Purchased
18	Responden 18	Axioo	Intel	On Board	2 GB	Windows	Cheap	Not Purchased
19	Responden 19	Dell	Intel	On Board	2 GB	Windows	Cheap	Purchased

No	Respondents	Brand	Processor	VGA	RAM	Operating System	Price	Results
20	Responden 20	Asus	AMD	On Board	2 GB	Windows	Cheap	Purchased

The C4.5 algorithm starts with the process of selecting the highest gain attribute as the root of the tree, then creates a branch for each value, then divides the case in branches, then repeats the process for each branch until all cases in the branch have the same class. To facilitate the application of methodology and system design, the flow of analysis and design is made as shown in Figure 1.

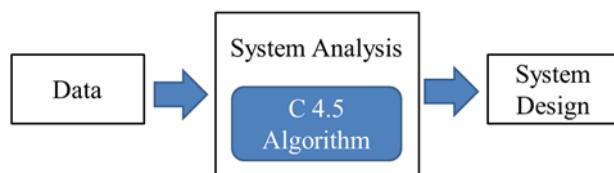

Figure 1. Flow of design and analysis

The flow chart is used to describe the classification process using the C4.5 algorithm can be seen in Figure 2.

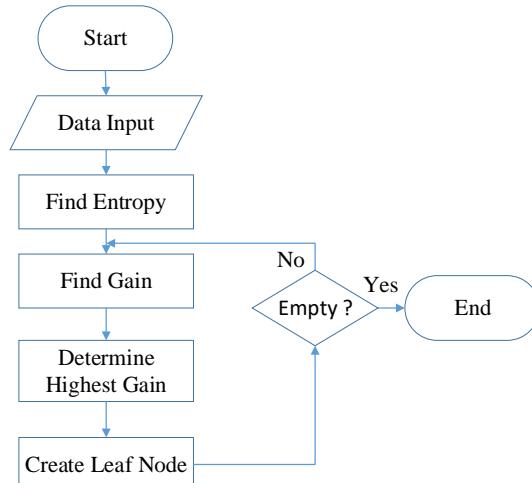

Figure 2. C 4.5 algorithms flowcart

To get accurate calculation results, calculations used Entropy and Gain for each variable [8]. Entropy measures uncertainty between random variables in a data [9]. The high Entropy value will affect the classification process [10]. The equation used to calculate Entropy and Gain, as follows:

$$Entropi(S) = \sum_{j=1}^k - p_j \log_2 p_j$$

S : Case set

k : Number of S partition

Pj : Probability obtained from the total (Yes / No) divided by the total case

$$Gain(S,A) = Entropy(S) - \sum_{i=1}^n \frac{|S_i|}{|S|} * Entropy(S_i)$$

S : Case set

- A : Attribute
 n : Number of A attribute partition
 $|S_i|$: Number of cases on the i partition
 $|S|$: Number of S partition

In Table 2, Entropy and Gain calculations have been performed. The gain obtained will affect whether or not the next node will occur. Each internal node is a test node and corresponds to an attribute; the edges leaving a node correspond to the possible values taken on by that attribute [11]. When we calculate Gain in one of the attributes and get the result Gain is the largest of the other attributes, mark the attribute. Next we need to pay attention to the biggest attribute value of the biggest gain attribute to be used as a key on the next node. When the node occurs, the largest gain value is 1, then the node calculation ends. Gain with a value of 1 can be taken the largest attribute value from the number of "Purchased" in the attribute. Entropy and gain calculation results can be seen in Table 2.

Table 2. Calculation of *Entropy* and *Gain*

Node	Atributs	Value	Number of Cases	Purchased	Not Purchased	Entropy	Gain
1	Total Brand		20	11	9	0,993	0,142
	Asus	6	4	2	0,918

Figure 1 illustrates the decision tree that is the result of Entropy and Gain calculations. The characteristics of decision trees consist of internal nodes, edges and leaf nodes [12]. Internal nodes are usually also called decision nodes namely nodes that represent a variable or a part of a variable. Edges are labels that explain the value or distance of values of a variable. Leaf nodes represent the results in decision making [13]. These three characteristics are inseparable entities. This decision tree can be used as a step to make decisions in choosing a laptop, can be seen in Figure 3.

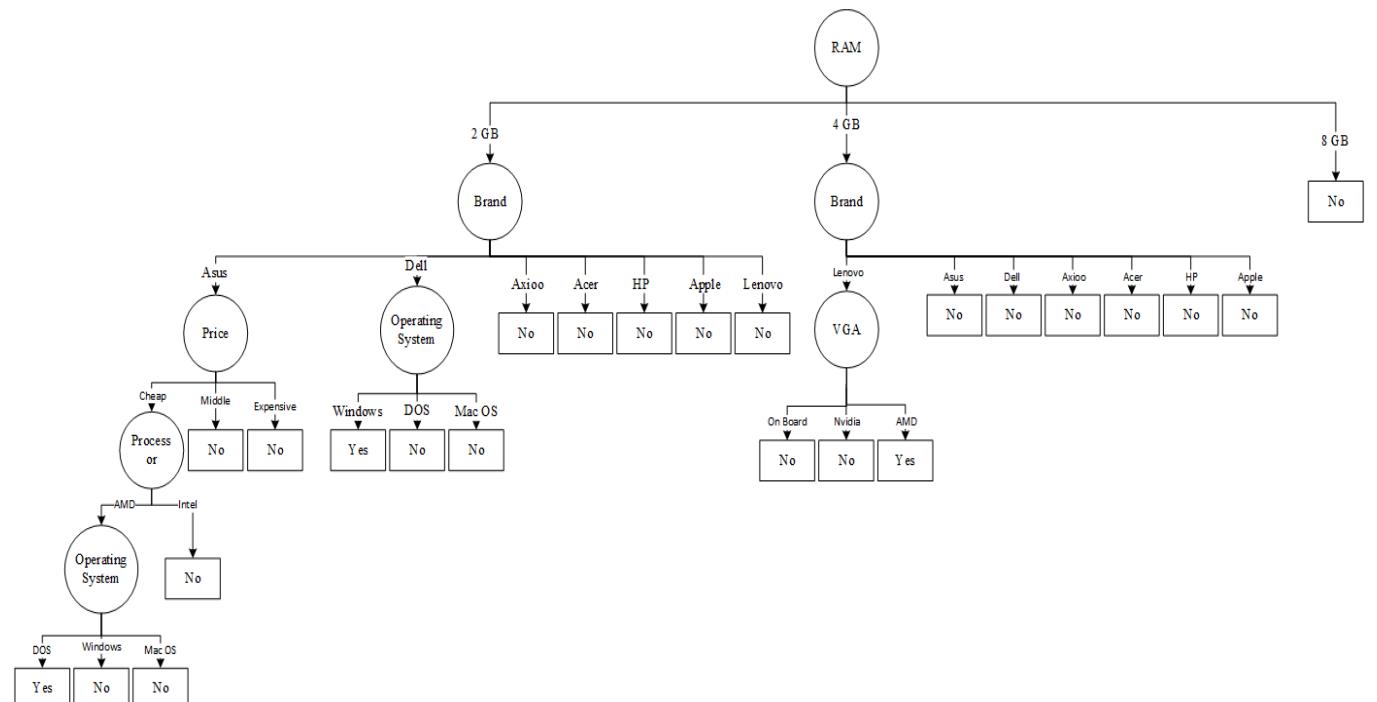

Figure 3. Decision tree result

4. Conclusion

Predicting something through the application of data mining using the C4.5 algorithm makes it easy for students, especially in determining the choice of laptop specifications that are most desirable for students to meet student needs and in accordance with the purchasing power of students. Students no longer need to look for various sources to find laptop specifications that are needed by students in meeting the needs

of students, because the laptop specifications from the results of the data mining application have provided the most desirable specifications of laptops. Based on the results of the data processing process through the application of data mining using the C4.5 algorithm, the laptop specification category is of interest to the 7th semester Information System students of Universitas Komputer Indonesia as follows: (1) RAM 2 GB, Asus, Cheap, AMD Processor, and have a Windows Operating System; (2) RAM 2 GB, Dell, dan have an Windows Operating System; (3) RAM 4 GB, Lenovo, and VGA Card AMD.

Acknowledgements

Researcher is grateful to the team of entrepreneurs who provide insight and guidance that are very helpful in completing this research. This research is expected to be useful for students in determining laptop specifications.
