1st Lecture

Information Technology
In The Digital Economy

Doing Business in The Digital Economy

- ◆ **Electronic Commerce** is Web-based systems to support buying, selling, & costumer services.
- ◆ The infrastructure for EC is **networked computing**, which is emerging as the standard computing environment in business, home, & government.
- ◆ Networked Computing connect several computers & other electronic devices via telecommunication networks.

3

Adam Sankaran

- ◆ Networked Computing involve:
 - **Internet**, a self-regulated network of computers networks connecting millions of business, individual, government, and other organization all over the world.
 - **Intranet**, corporate network that function with internet technologies, using IP.
 - **Extranet**, a secure network that allows business partners to access portion of each other's intranet.
- ◆ The collection of computer systems used by an organization is termed **Information Technology (IT)**

4

Adam Sankaran

The reason why almost all organization use IT

- ◆ The IT is become the major facilitator of business activities in the world.
- ◆ IT is a catalyst of fundamental change in the structure, operations, & management of organizations, due to the capabilities.

5

Adam Sankaran

Capabilities of IT

- ◆ Perform high speed, high volume, numerical computations.
- ◆ Provide fast, accurate , & inexpensive communication within and between organization.
- ◆ Store huge amount of information in an easy-to-access, yet small space.
- ◆ Allow quick and inexpensive access to vast amount information, worldwide.
- ◆ Increase the effectiveness & efficiency of people working in groups in one place or in several location

6

Adam Sankaran

Capabilities of IT (cont.)

- ◆ Vividly present information that challenges the human mind.
- ◆ Automate both semiautomatic business process and manually done task.
- ◆ Speed typing & editing,
- ◆ Can be wireless, thus supporting unique applications.
- ◆ Accomplish all of the above much less expensively than when done manually.

7

Adam Sarsason

These Capabilities support 5 business objective

- ◆ Improving productivity (51%)
- ◆ Reducing cost (39%)
- ◆ Improving decision making (36%)
- ◆ Enhancing customer relationship (33%)
- ◆ Developing new strategic applications (33%)

8

Adam Sarsason

The Digital Economy

- ◆ The **DE** refer to an economy that is based on digital technologies.
Including:
 - Digital communication networks
 - Computer
 - Software
 - And et al.
- ◆ The DE is also called **Internet Economy** or **Web Economy**

9

Adam Sarsason

The Global Platform of DE

- ◆ A Vast array of digitizable product which are delivered over the digital infrastructure anytime, anywhere in the world.
- ◆ Consumers and firms conducting financial transactions digitally – through digital currencies or financial tokens carried via networked computers and mobile devices.
- ◆ Physical goods such home appliances and automobiles, which are embedded with microprocessors and networking capabilities.

10

Adam Sarsason

New Business Models

- ◆ Business model is a method of doing business by which a company can generate revenue to sustain itself.
- ◆ New Business Models of DE
 - Name-Your-Own-Price (Priceline.com)
 - Dynamic Brokering (GetThere.com)
 - Reserve Auction (gegxs.com)
 - Affiliate Marketing (Amazon.com)
 - Group Purchasing (etrana.com)
 - E-marketplaces & Exchange (e-steel.com)

11

Adam Sorkson

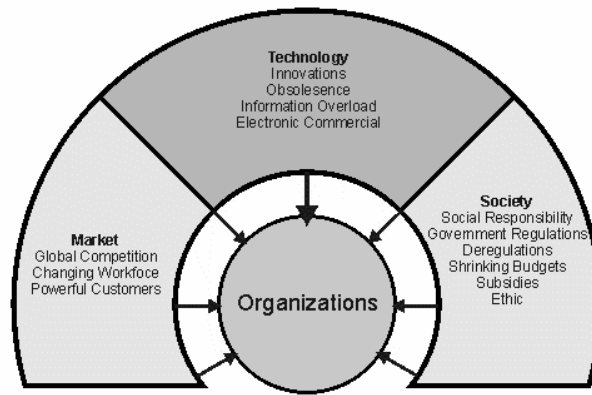

IT Support to Organizational Responses

12

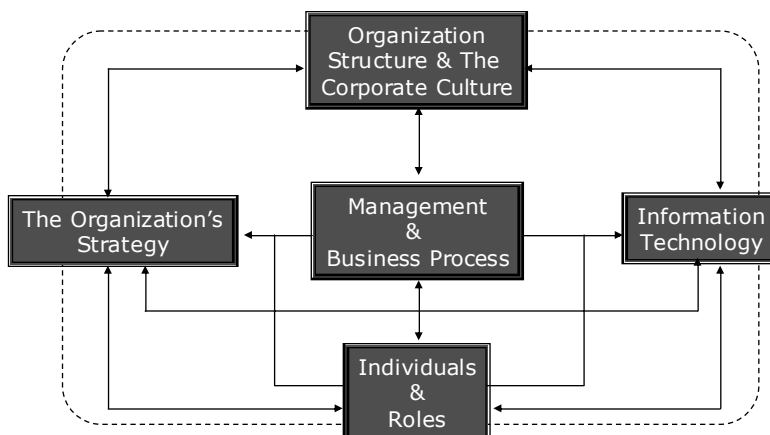

Adam Sorkson

The Major Business Pressure

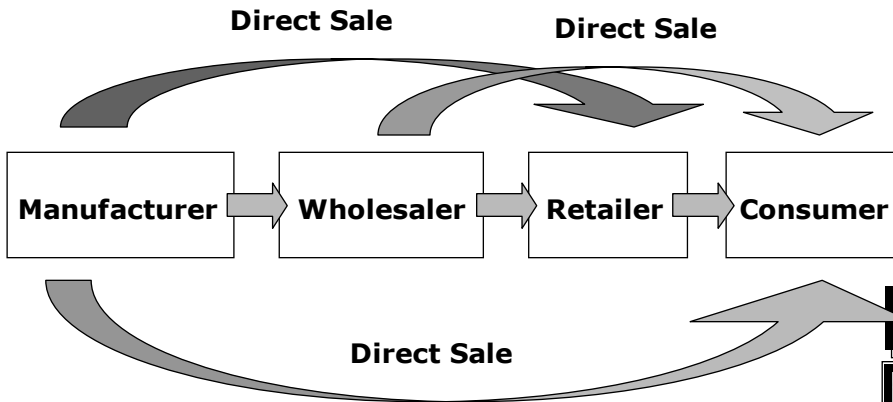

13

Framework for Organizational & Societal Impacts of IT

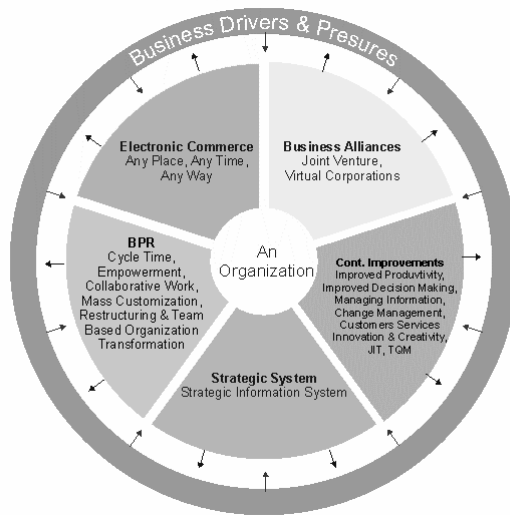

14

The Organization Strategies

Organizational Responses

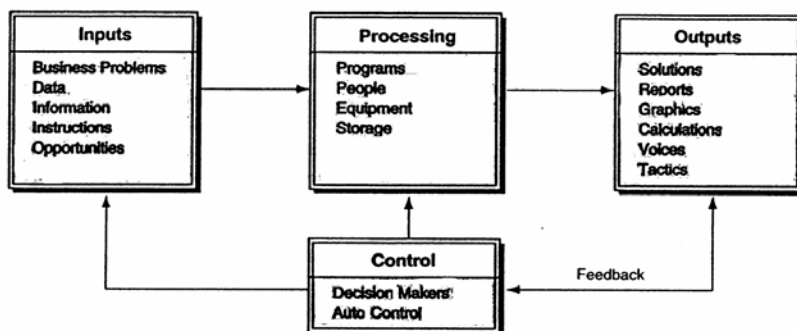

What is Information System?

- ◆ Information system is a physical process that supports an organization by collecting, processing, storing, and analyzing data, and providing information to achieve organizational goals.
- ◆ Conceptually, IS can exist without computers, but the power of computer which make IS feasible.

17

Adam Sartono

Schematic View of an IS

18

Adam Sartono

What is Computer-Based Information System?

- ◆ CBIS is an IS that used computer technology to perform some or all of its intended task.
- ◆ The basic component of CBIS
 - Hardware
 - Software
 - A database
 - A network
 - Procedures
 - People
 - ◆ Note that not every system includes all these component

The Difference Between Computers & Information System

- ◆ Computers provide effective and efficient ways of processing data, and they are a necessary part of an IS.
- ◆ An IS involves much more than just computers. The successful application of an IS requires an understanding of the business and its environment that supported by the IS.

What is Information Technology?

- ◆ A narrow definition: the technology component of an information system. It includes the hardware, database, software, network, and other devices. (viewed as a subsystem of IS)
- ◆ A wider definition: the collection of several ISs, Users, and management for an entire organization.

21

Adam Sankaran

Information Technology Development & Trends

- ◆ Cost performance Ratio
 - In about 10 years , a computer will cost the same as its cost today but will 50 time more powerful, and labor cost could double.
 - Moore's Law: The processing power of silicon chips would double every 18 Months.
 - McGarvey, states that the performance of optical communication network is growing by factor of ten every three years
- ◆ Object-Oriented Environment & Document Management (see Table 1.3)

22

Adam Sankaran

Networked Computing

- ◆ Metcalfe's Law: The value of the network grows roughly in line with the square of the number of its users. (n^2)
- ◆ Kelly extension: The value of the Internet is much larger, On the internet we can make multiple simultaneous connections between group or people. (n^n)

23

Adam Sankov

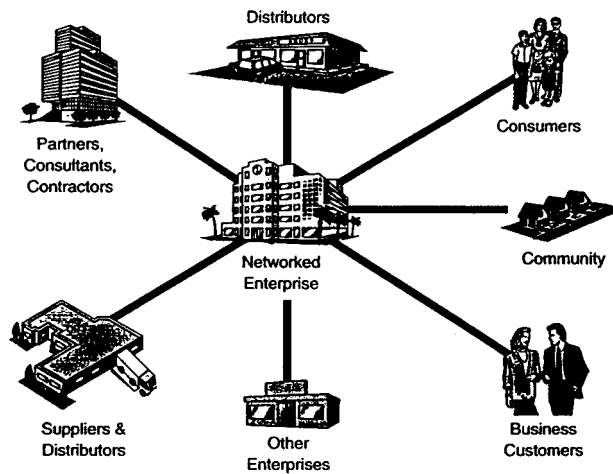

Development in NC

- ◆ Mobile Commerce (M-Commerce) \Rightarrow Location-Based Commerce (L-Commerce)
- ◆ The Network Computer
- ◆ Integrated Home Computing
- ◆ The Internet \Rightarrow Information Superhighway
- ◆ Intranets & Extranets are accessed via information portals
- ◆ Corporate Portal
- ◆ The Networked Enterprise

24

Adam Sankov

The Networked Enterprise

25

Adam Sarsason

Why Should You Learn About IT?

- ◆ Being IT Literate On the Job and off
- ◆ Finding Employment Opportunities in IT
- ◆ Its necessary for anyone who aspired to lead a firm in future

26

Adam Sarsason

General Ethical Principle

- ◆ The Golden Rule “treat other people in the same way that you would like them o treat you”
- ◆ The Categorical Imperative “if an action is not suitable to everyone to take, then is not suitable to anyone”
- ◆ The Slippery Slope Rule “if action can be repeated over and over again with no negative consequences, then no problem. But if such a repeated action would lead to disastrous consequences, then the action should not be undertaken even once”
- ◆ The Utilitarian Rule “ the best action is the one that provides the most good for the most people”
- ◆ No Free Lunch “if you want to use it, you should compensate the owner for doing so”

27

Adam Sankov

Ethical Dilemmas

- ◆ It is acceptable to buy a software product, but then to install twice?
- ◆ How about if you install it , then give it to a friend for personal use?
- ◆ Alternatively, what if you install it and use a CD writer to create 100 copies – and sell them for profit to any one who wishes to buy?
- ◆ What about making the software available on the Web site for other to download?
- ◆ What about trading software on the Web (customers to customers)?

28

Adam Sankov
